Discovered that DNA passes heredity instructions through successive generations of organisms eÁÁÁ it carries the chemical code of life, as revealed by the AveryeÁÁÁMacLeodeÁÁÁMcCarty experiment. Groundbreaking genetics: showed that genes switch the physical traits of an organism on or off; discovered chromosomal crossover, which increases genetic variation in species; discovered transposition eÁÁÁ that genes can move about within chromosomes. Selman Waksman 1888 eÁÁÁ 1973. Robert Hooke 1635 eÁÁÁ 1703. Rudolf Virchow 1821 eÁÁÁ 1902. Improved the agricultural economy of the United States by promoting nitrogen-providing peanuts as an alternative crop to cotton to prevent soil depletion. Discovered how the immune system produces millions of different antibodies to combat almost any micro-organism. Youyou Tu Born 1930. John Eccles 1903 eÁÁÁ 1997. Antonie van Leeuwenhoek 1632 eÁÁÁ 1723. Linda Buck Born 1947. Founded scientific psychiatry; made humane changes to the conditions under which mentally ill people were held; promoted the idea that mentally ill people should be understood as individuals. Discovered the alpha-helix structure of proteins; proved that sickle-cell anemia is a molecular disease. Codiscovered DNAcÁÁÁs structure and replication mechanism; established the Sequence Hypothesis and the Central Dogma; discovered that DNA uses a triplet code to control the formation of proteins from amino acids. Franz Mesmer 1734 eÁÁÁ 1815. In the early 1960s, thousands of children died or were born malformed because their mothers took the drug thalidomide during pregnancy. Gene Shoemaker 1928 to 1997. Howard Florey and his scientific team transformed penicillin from a scientific curiosity into a potent antibiotic eÁÁÁ a magic bullet that has saved countless millions of lives. The first woman to qualify as a physician in America; founder of AmericaeÁÁÁs first medical school for women. George Washington Carver c.1860 eÁÁÁ 1943. Authored one of the most famous books in history, On the Origin of Species, in which he described and provided evidence for the theory of evolution by natural selection. Discovered the human blood group system, paving the way for safe blood transfusions; discovered the Rh factor in blood; proved polio is an infectious disease spread by a virus; discovered haptens. Popularizer of science; discovered that dinosaurs cared for their young and some nested in colonies. Marie Curie 1867 eÁÁÁ 1934. The father of modern microbiology; transformed chemistry and biology with his discovery of mirror-image molecules; discovered anaerobic bacteria; established the germ theory of disease; invented food preservation by pasteurization. Founder of modern neuroscience; proved the neuron doctrine, which says that neurons behave as biochemically distinct cells rather than a network of interlinked cells. Explained blood circulation for the first time, showing there is a complete circuit beginning and ending in the heart. First to read the entire genome of a free-living organism; played a major role in mapping the human genome; discovered more genes than had ever been previously documented; created synthetic DNA and new bacteria species. Barbara McClintock 1902 eÁÁÁ 1992. Oscar winning marine pioneer; coined the breathe-on-demand valve for SCUBA diving; popularized marine biology with several dramatic television series.
