Zambia ZM ZMB 894 Zimbabwe ZW ZWE 716 CountryCode.org is your complete guide to call anywhere in the world. The calling chart above will help you find the dialing codes you need to make long distance phone calls to friends, family, and business partners around the globe. Simply find and click the country you wish to call. You'll find instructions on how to call that country using its country code, as well as other helpful information like area codes, ISO country codes, and the kinds of electrical outlets and power jacks found in that part of the world. Making a phone call has never been easier with CountryCode.org. [1] It is not only the US Americans who are known for their many abbreviations. Statisticians, too, can often achieve more with just a few letters. And sometimes you do need them: The international country codes of all states according to several different standards.International Organization for Standardization U.S. Federal Information Processing Standard No. 10An even more detailed version of these country codes can also be obtained as a CSV file in the download area. A list of all international calling codes is also available separately. Probably the best known country codes come from the International Olympic Committee (IOC). These codes appear on our TVs during all Olympic gams and also at most international matches, e.g., in soccer, handball and basketball. FIFA and most other sports federations use them – even when the sports are not Olympic disciplines at all. However, the IOC codes differ from those of the International Organization for Standardization (ISO), and this regularly causes confusion. The International Organization for Standardization defines its country codes in standard 3166-1. ISO codes also consist of three capital letters in the alpha-3 version. For example, Germany has the IOC code "GER" for the English country name "Germany." However, the three-letter ISO code is "DEU" is abbreviated from the German name "Deutschland." So, although ISO is an international organization, it occasionally uses the national language to derive the abbreviations. This is not always the case: the country code for Austria (the national language is also German) is "AUT", based on the Latin "Austria."The International Organization for Standardization has other country codes. Somewhat impractical, due to hardly being legible, is the numeric variant, such as 840 for the United States. It is almost only used in information technology, where it is no longer important that the code be human readable. More common for this is the 2-letter code alpha-2. It is mainly used for assigning a country-specific domain. The European IBAN system for bank account numbers also uses this code. It is also often identical to the car license plate. Currency codes No codes for currencies appear in the table above, but they also exist. They also consist of three letters according to an always uniform system: First is the two letters of the ISO code (3166-1 alpha-2) and then the first letter of the unit. So for the US Dollar, the letters "US" come first and then an "D" for the dollar follows. The code for the Thai Baht is therefore THB and for the Japanese Yen it is "JPY".Again, of course, there are exceptions: Currencies like the euro are not tied to a single country, which is why it was given the abbreviation EUR. And individual countries, such as Mexico, are also treated differently. The Mexican peso should actually has the code MXP in the system, but since a currency reform in 1992, the abbreviation is "MXN". Fips 10 Fips 10 is a code originally from the USA, which includes not only countries, but also dependent and other territories with sovereign characteristics. Although they also consist of two capital letters, they usually do not coincide with the ISO code. Because of the US origin, the English-language names are often the basis. Thus Germany received the letter combination "GM," which was derived from Germany. In the beginning, this code was mainly used in foreign policy and military areas of the USA. However, since numerous additional territories also received a Fips 10 code, it spread beyond the USA and is used in international databases. Examples of additional territories are the British military base Akrotiri (AX), the Gaza Strip (GZ) or the uninhabited Johnston Atoll (JO), which belongs to the USA. Local time Moscow Same time as in your city. %s hour(s) ahead of your city. %s hour(s) behind your city. Daylight saving time: Applied Not applied EXIT CODE This is the code you need to dial OUT from a country. It is also referred to as the IDD code (International Direct Dialing) or ISD code (International Subscriber Dialing) COUNTRY CODE This is the code you need to dial IN to a country. Each country is assigned a unique country code. AREA CODE This is the code for a part of the country. It is usually a general area or a city. Some countries are not large enough to warrant their own code, so will have the country code 1 and use the area code to define the country. LOCAL NUMBER This is the local number you would like to call. Here is some useful travel information about Russia. Flag RegionEurope ISO 2 digit CodeRU ISO 3 digit CodeRU ISO 3 digit CodeRUS Capital CityMoscow CurrencyRuble Population140,702,000 Area (SQ KM)17,100,000 This page helps you call from to Russia using international country codes. Area Codes for Russia are also supplied. Country Code 7 is for Russia. The dialing code is also described as phone code 7 or dialling code 7 and is sometimes described as a calling code or international dialling code. The dialing code for Russia is 7.
