Je suppose que l'attribution des adresses IP est dynamique chez toi et que tu veux rinitiliser le reseau suite un changement de paramtrage du serveur DHCP. Pour cel, il suffit, sauf erreur, de faire un "restart" avec le script d'initialisation du reseau. Sur une Fedora cel donne /etc/rc.d/init.d/network restart ou /etc/rc.d/init.d/network stopet /etc/rc.d/init.d/network start Peut-tre que ton script d'initialisation est ailleurs sur ta distribution, vrifie ce point. Si l'allocation de tes adresses IP n'est pas dynamique, tu devras modifier les fichiers de configuration affects tes cartes rseau utililis par tes scripts de dmarrage.
