The term "liminal space" is used in architecture to describe areas that serve as transitions between different destinations, such as hallways, corridors, and foyers. These spaces are also known as transitional spaces or transition spaces and can be found within a house. The concept of liminal space has been explored by various authors, including those who discuss the use of specific terms like "transitional hall" or "octagonal foyer" to describe certain types of spaces.###ARTICLEparaphrased text here
