The evolution of starter Pokémon is a fascinating aspect of the franchise, with various conditions triggering their transformations. This process applies to multiple games across different generations, ensuring consistency in the evolution mechanics. The classic trio of Fire-type, Water-type, and Grass-type starters has remained a staple since Generation 1. These iconic Pokémon not only serve as companions but also have secondary typings that emerge upon reaching higher levels. **###ARTICLE**The tradition of starter Pokémon has been a cornerstone of the franchise since the very beginning. Each generation brings with it a new set of three starters, carefully crafted to reflect the unique characteristics of each region. For the newcomer and the seasoned veteran alike, choosing a starter is an experience that holds great significance. It's a moment that marks the beginning of a new journey, one that will shape the course of their Pokémon training. Throughout the nine generations thus far, there have been 27 distinct starter lines, each with its own set of unique characteristics and evolutions. From the classic trio of Bulbasaur, Charmander, and Squirtle in Generation I to the more modern options like Rowlet, Litten, and Popplio in Generation VII, each starter has its own story to tell. **###ARTICLE**Hisuian Decidueye, CyndaquilFireQuilava and Hisuian Typhlosion are available to catch from level 36. Oshawott, Dewott and Hisuian Samurott can be found at level 17. In the Pokémon Scarlet and Violet games, players can get all three native starters through trade. Additionally, every past partner Pokemon is accessible in the Hidden Treasure of Area Zero DLC. Sprigatito's evolutionary line includes Floragato (level 16) and Meowscarada (level 36), while Fuecoco evolves into Skeledirge, with the latter having two forms - its pre-evolved form being Skeledeel (not available in the game). Cyndaquil's evolution line consists of Quilava at level 16. Hisuian Typhlosion is a further evolution of the Hisuian Fire-type Quilladin. The evolutionary lines of these Pokémon can be found below: Hisuian Decidueye: Evolution from: Hisuian Growlithe Hisuian Growlithe Hisuian Growlithe has two evolutions - its pre-evolved form being Growlithe (level 16) and the evolved version, Hisuian Growlithe. CyndaquilFireQuilava: Evolution from: Cyndaquil Cyndaquil Cyndaquil evolves into Quilava at level 14. Then Quilava further evolves into Firestone Quilava is not in the game but a new evolution - Firestone Quilava has two forms - its pre-evolved form being Quilava and then Quilava further evolving to CyndaquilFireQuilava. **###ARTICLE**Fletchling is a Normal/Flying type Pokémon introduced in Generation 6, known for having both friendly and ferocious personalities. This Pokémon has a unique appearance with its beautiful chirp, but it also possesses aggressive tendencies in battle. Fletchling evolves into Fletchinder at level 17. First partner Pokémon are often chosen by trainers because of the unique bond they share with their partner Pokémon or because they believe it is the best Pokémon for their adventure. Many skilled Trainers, including Gym Leaders, Elite Four members, and even Pokémon Champions, continue to use their partner Pokémon and often have them as the most powerful in their teams. In some games, a player's first partner Pokémon can also be their Partner Pokémon that follows its Trainer around outside of its Poké Ball. The rival's first partner Pokémon typically has an advantage over the player's due to its type, which applies to Blue (in Pocket Monsters Red and Green), Silver, Brendan, May, Barry, Cheren (in Pokémon Black and White), Hugh (in Pokémon Black 2 and White 2), Clemm, and Serena. Lucas, Dawn, Bianca, Shauna, Hau, and Hop choose the first partner Pokémon with a disadvantage due to its type. A species of first partner Pokémon rarely appears in the wild, namely one that was chosen by the player and their rival. Even though a first partner Pokémon plays a vital role in assisting the player during wild encounters, there have been cases where a human faces a wild Pokémon alone, such as Professor Oak against Pikachu in Pokémon Yellow Special Pikachu Edition. In most games of the core series, there are three first partner Pokémon, with types Grass, Water, and Fire. The rival typically chooses the Pokémon with an advantage over the player's. First partner Pokémon have two evolved forms (except for Pikachu and Eevee). All of the first partner Pokémon in the core series have a gender ratio of 7 male to 1 female, with Pikachu being an exception. This gender ratio was chosen by developers to make first partner Pokémon more difficult to obtain. Aside from having Grass as their primary type, Bulbasaur has Poison as its secondary type, while Rowlet has Flying and Ghost/Fighting when it evolves. The concept of a fan name is not explicitly defined in the context of Pokémon, but fans in Japan often refer to the first partner Pokémon as "御三家" (the big three), which refers to the Grass, Fire, and Water types. This term is used due to the unique characteristics and inspirations behind each of these starter Pokémon. The Sinnoh starters, Torterra, Infernape, and Empoleon, were inspired by mythological characters such as the World Turtle, Sun Wukong, and Poseidon, respectively. The Unova starters, Serperior, Emboar, and Samurott, drew inspiration from different countries, with Serperior being based on France, Emboar on China, and Samurott inspired by Japan. The Kalos starters, Chestnut, Delphox, and Greninja, were influenced by RPG classes, with Chestnut representing the Fighter class, Delphox embodying the Mage class, and Greninja taking on the characteristics of a Thief. The Galar starters, Rillaboom, Cinderace, and Inteleon, drew inspiration from British occupations, with Rillaboom being a drummer, Cinderace an association football player, and Inteleon a spy. The Hisui starters, Decidueye, Typhlosion, and Samurott, were partially inspired by kinds of warriors from Feudal Japan, while the Paldea starters, Meowscarada, Skeledirge, and Quaquaval, drew inspiration from certain types of entertainers. Chesnaught Delphox Greninja Generation VII Alola first partner Pokémon are part Fighting type, Psychic type or Dark type which give them an advantage over their primary types Rowlet Litten Popplio receive from Hala and Professor Kukui in Iki Town or on Route 1 in Ultra Sun and Ultra Moon the player gets to choose from three Pokémon Island Scan can be used to find first partner Pokémon and their Evolutions such as Decidueye which is part Ghost type and has an immunity to Normal and Fighting types Incineroar which is part Dark type and has an immunity to Psychic type Primarina which is part Fairy type and has an immunity to Dragon type Generation VIII Grookey Scorbunny Sobble can be found in Grass Water Fire-type Friend Safaris Hop chooses a Pokémon with a type disadvantage Leon keeps a Pokémon with a type advantage over the player's Marnie's first partner Pokémon is Morpeko Generation IX Sprigatito Fuecoco Quaxly can be chosen from Director Clavell Nemona chooses a Pokémon with a type disadvantage Chikorita Tepig Totodile can be found in Lumiose City or obtained through other games Spinoffs such as Pokémon Colosseum and Pokémon XD: Gale of Darkness differ depending on the player's gender Pokémon GO players can obtain Kanto first partner Pokémon while Pokémon Masters EX uses Pikachu as its first partner PokémonStarter Pokémon vary by region, yet retain their original characteristics like in the games. Manga and Pokémon Adventures alike showcase first partner Pokémon reserved exclusively for certain characters selected by regional Pokémon Professor, known as Pokédex Holders. These characters usually start with a different primary Pokémon than usual from the games. The Pokémon Professors either give them their initial partner Pokémon or permit them to retain it. Interestingly, Blake received his first partner Pokémon from the International Police. In Pokémon Pocket Monsters, Red selects Clefairy as his first partner during the first chapter due to Clefairy having saved him from a wild Pokémon. In Pokémon Yellow Special Pikachu Edition and Let's Go series, Pikachu and Eevee are the only primary Pokémon incapable of evolving in their respective games. Additionally, these Pokémon cannot be traded between games. Ken Sugimori states that first partner Pokémon should not appear overly powerful at their initial stages but rather develop into more formidable forms upon evolution. Generation VI marked the introduction of unique first partner Pokémon differing from traditional quadrupedal and bipedal starters, Fennekin, Froakie, Chespin, Decidueye, and Popplio exemplify this shift. Currently, Bulbasaur and Rowlet are the only basic stage starter Pokémon to possess dual types. Evolution plays a pivotal role in the Pokémon series. This process enhances Pokémon strength and expands their move pools, rendering some species obtainable through evolution alone. Various methods of evolution exist, with newer games introducing new variations. This article lists Pokémon that evolve through trading, typically requiring an item to be held. Additionally, many Pokémon require friendship levels or specific actions to trigger evolution. A Pokémon's Friendship level can be increased by factors such as walking with them in your party, battling, and administering massages or haircuts. The table below outlines starter Pokémon for each generation: Gen 1 Starters: Bulbasaur, Charmander, Squirtle (and Pikachu) Gen 2 Starters: Chikorita, Cyndaquil, Totodile Gen 3 Starters: Treecko, Torchic, Mudkip Gen 4 Starters: Turtwig, Chimchar, Piplup Gen 5 Starters: Snivy, Tepig, Oshawott Gen 6 Starters: Chespin, Fennekin, Froakie Gen 7 Starters: Rowlet, Litten, Popplio Gen 8 Starters: Grookey, Scorbunny, Sobble To successfully navigate the early stages of your Pokémon journey, it is crucial to choose a starter Pokémon that offers the right balance. In Generation 4, for example, Piplup's water-type moves provide an advantage against the Rock- and Grass-type Pokémon found in early gym battles. However, each starter has a weakness that you must be aware of when making your decision. Chimchar is effective against Gardenia but struggles against Roark's Pokémon lineup, while Turtwig dominates Roark's Pokémon but falters against grass-type opponents in the Eterna Gym battle. In contrast, Generation V's starters are more balanced for early progression, with the Striaton City gym battle taking your chosen starter into account. Tepig is an excellent choice for progressing through the Nacrene and Castelia City gyms due to its water-type moves, while Oshawott offers a greater challenge. The X and Y games introduce grass-fire-water types, but your first gym battle pits you against bug-types instead of fire-types. For Generation 6, Froakie is an easy early starter choice, as it faces rock-types in the Cyllage City Gym. Chespin handles these battles well too, while Fennekin presents a tougher challenge due to its varied moveset. In Pokémon Sun and Moon, Rowlet starts with grass-type powers but struggles against flying-type opponents. Litten is an ideal choice for later progression due to its powerful Incineroar evolution. Generation VII's starters are balanced across the board, with Scorbunny being an obvious choice for a swift win in the first gym battle. However, Grookey and Scobble offer alternative options with different levels of challenge. Choosing your starter Pokémon is not just about strategy; it's also personal preference. Whether you have a favorite type or simply love a particular design, picking a starter that suits you best will make all the difference in your journey. Eeveelutions in Glaceon and Leafeon - A Study of Generational Pokémon Evolutions The concept of Eeveelutions has been a staple in the Pokémon franchise for decades, with each new generation introducing its own unique set of evolutions. While some may argue that certain generations began to stray from their path, I firmly believe that this is not entirely accurate. Generation 4 introduced us to Turtwig and Chimchar, two starters that have captivated the hearts of many fans. Their evolutions, Glaceon and Leafeon respectively, are simply adorable and showcase the incredible versatility of Eevee. In fact, my first encounter with Piplup was almost enough to convince me not to evolve it at all - its sheer cuteness is undeniable. Fast forward to Generation 5, which brought us to the Unova region and a whopping 156 new Pokémon. While some may argue that this generation's starter designs were lacking, I firmly believe that each of Oshawott, Snivy, and Tepig has something unique to offer. Even the most unusual-looking starters can be undeniably cute in their own right. Generation 6 took us on a journey through the Kalos region, with its European aesthetic and added the latest Eeveelution, Sylveon. This generation was...interesting for me personally, as I shifted my allegiance from Water types to Grass after Froakie's bizarre fluffy frog appearance left me slightly perturbed. The addition of new regions, such as Alola and Galar, brought with it a plethora of new Pokémon and starters. Rowlett, Litten, and Popplio stole the show in Generation 6, each bringing their own unique charm to the table. And let's not forget the odd mix of starters in Generation 8 - Sprigatito, Fuecoco, and Quaxly are all undeniably cute in their own ways. Finally, we arrive at Generation 9, which has taken us to Paldea and Kitakami. The new starters, Sprigatito, Fuecoco, and Quaxly, have quickly become fan favorites, with each bringing its own brand of charm to the table. Throughout my journey through the generations, I've come to realize that Eeveelutions are not just about evolution - they're about capturing our imaginations and leaving a lasting impact on us. Pikachu's iconic status as a starter Pokémon is a testament to this, and I firmly believe that each generation has its own unique take on what makes a great starter.
