Replacing the Transmission in Your Chevy Cruze: What You Need to Know If your transmission needs to be replaced, consider this as an opportunity to upgrade and improve fuel efficiency. Regular maintenance and careful driving play a significant role in prolonging the life of the transmission. It is recommended to replace the transmission at 150,000 miles, but some models last longer with proper care. If you're looking to replace your Chevy Cruze's transmission, it is crucial to learn about costs to make an informed decision. The prices for transmissions in the Chevy Cruze vary depending on the type and model. The F40 manual can cost \$1,945.66, while the 6T30 automatic ranges from \$2,495 to \$3,499.95. The Aisin-Warner AF40-6 automatic costs around \$1,560. There are several problems that may arise with these transmissions. The F40 transmission may cause difficulty shifting into reverse and first gear, leading to frustration for drivers. In some cases, it can even prevent the driver from shifting into second gear. The 6T30 transmission's bushings can wear out over time, causing issues with the 2-6 gear piston. The 6T40 transmission is prone to slipping between gears, erratic shifting behavior, and loss of reverse or forward gears. The AF40-6 transmission may experience shift flare, where it fails to engage correctly into the next gear when upshifting. This can increase engine speed before gear engagement. Hard downshifting is another issue that can occur with this transmission. The 6T30, 6T40, AF40-6, and F40 are six-speed automatic transmissions produced by General Motors for various vehicles, including the Chevrolet Sonic and Cruze. The 6T30 is a compact variant weighing 56.2 kg, while the 6T40 is designed for front-wheel-drive cars with transverse powertrains, boasting consistent shift performance in extreme conditions. The F40-6 transmission, produced by Aisin Seiki, fits in the same space as a manual transmission and weighs 90 kg. Unlike other transmissions, it does not require fluid changes, instead being filled with DEXRON-VI premium fluid for life. It's essential to note that each transmission may require unique transmission fluid, and replacing it every 45,000 miles is recommended by some experts.
