Frequently Asked QuestionsOur support team searches for useful product information and answers to frequently asked questions. If you find an inaccuracy in our frequently asked questions, please let us know by using our contact form. It's advisable to check the filters of your air conditioner 4 times a year. Dirty filters can be cleaned with the use of a vacuum cleaner or can be washed, depending on which type they are. During maintenance a professional should judge whether it is time to replace the filters. This was helpful (2803) Read more BTU stands for British Thermal Unit. This is unit to indicate the capacity to cool. This was helpful (1016) Read more The cold air produced by an air conditioner often has a relatively low humidity. However, the effect is less than when using an actual dehumidifier. Some air conditioners do have a special feature to dehumidify the air. This was helpful (789) Read more R-410A is a cooling agent that is used in appliances that cool up to 0C, like refrigerators and air conditioners. It is the replacement of older cooling agents and does not damage the ozon layer. This was helpful (535) Read more This depends on the space, but in general the following rules can be followed. Make sure that there is nothing obstructing the airflow. Make sure the location is accessible for maintenance. Mount the unit at least 2 meters from the ground. This was helpful (388) Read more If the air conditioner has been properly maintained then it will have no influence on air quality. If for example a filter hasn't been replaced for a long time, or other maintenance has not been performed, than an air conditioner can produce dirty air. This was helpful (386) Read more No, absolutely not. A mobile air conditioner needs space to allow airflow and air intake. In a small space the device can overheat. This was helpful (385) Read more Can't find what you are looking for? A local Carrier expert can help answer your questions. Find a Carrier expert in your area.
